PATENT Ally. Dkt. No. WEAT/0023.C2

IN THE CLAIMS:

Please cancel claims 1-20 and amend the claims as follows:

- 1. 20. (Cancelled)
- 21. (Previously Presented) A method of sealing an annular area in a wellbore, comprising:

providing a tubular member; and

deforming the tubular member in a manner whereby an outer surface of the tubular member assumes a shape of a non-uniform surrounding surface and forms a seal therebetween.

- 22. (Previously Presented) The method of claim 21, wherein a ductile material disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 23. (Previously Presented) The method of claim 21, wherein a ductile metal disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 24. (Previously Presented) The method of claim 21, wherein an elastomer disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 25. (Previously Presented) A method of forming a profile in a section of tubing within a wellbore, comprising:

providing an expander device having at least one radially extendable expander member:

positioning the expander device in the wellbore at a predetermined location in the section of tubing; and

2004/008

extending the member to deform the tubing at said location to create the profile in the internal face of the tubing.

PATTERSON&SHERIDAN

- (Previously Presented) The method of claim 25, wherein the profile is in the form 26. of at least one annular recess.
- (Previously Presented) The method of claim 25, wherein the tubing is deformed 27. by rolling expansion, the expander member being rotated within the tubing with a face in rolling contact with an internal face of the tubing.
- (Previously Presented) The method of claim 25, wherein the tubing is deformed 28. by compressive plastic deformation, producing a localised reduction in wall thickness and a subsequent increase in tubing diameter.
- (Previously Presented) The method of claim 25, wherein the tubing is deformed 29. by compressive plastic deformation, producing flow of wall material to create the profile.
- (Previously Presented) The method of claim 25, wherein the expander member 30. is in the form of a roller.
- (Previously Presented) The method of claim 25, wherein the expander member 31. is extended by application of fluid pressure.
- (Previously Presented) The method of claim 25, wherein a plurality of radially 32. extendable expander members are provided.
- (Previously Presented) The method of claim 25, wherein the expander is rotated 33. to create the profile.
